ADAPTIVE ALPHA OPPORTUNITIES ETF

SUMMARY PROSPECTUS

(Ticker: AGOX)

October 1, 2024

Before you invest, you may want to review the Adaptive Alpha Opportunities ETF's (the "Fund") Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund online at <https://etfpages.com/AGOX>.

INVESTMENT OBJECTIVE

The **Adaptive Alpha Opportunities ETF** (the “Fund”) seeks capital appreciation.

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

Annual Fund Operating Expenses <i>(ongoing expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	1.00%
Other Expenses	0.22%
Acquired Fund Fees and Expenses ¹	0.12%
Total Annual Fund Operating Expenses	1.34%

¹ “Acquired Fund” means any investment company in which the Fund invests or has invested during the previous fiscal year. The “Total Annual Fund Operating Expenses” and “Net Annual Fund Operating Expenses” will not match the Fund’s gross and net expense ratios reported in the Financial Highlights from the Fund’s financial statements, which reflect the operating expenses of the Fund and do not include Acquired Fund Fees and Expenses.

Example. This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem (or you hold) all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and the Fund’s operating expenses remain the same. The Example includes the Fund’s contractual expense limitation through September 30, 2024. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$136	\$425	\$734	\$1,613

Portfolio Turnover. The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the fiscal year ended May 31, 2024, the Fund’s portfolio turnover rate was 368.05% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

As an actively managed exchange-traded fund (“ETF”), the Fund will not seek to replicate the performance of an index. The Fund’s portfolio manager seeks to achieve the Fund’s investment objective of capital appreciation by investing in exchange-traded funds that are registered under the Investment Company Act of 1940, as amended (the “1940 Act”) and not affiliated with the Fund (“Portfolio Funds”) that invest in equity securities of any market capitalization of issuers from a number of countries throughout the world, including emerging market countries. In addition to its indirect investments, the Fund may also invest

directly in equity securities and fixed income securities, as well as put and call options, and cash and cash equivalents as part of its risk management strategy. The Fund is considered “diversified” under the 1940 Act.

The strategy utilizes a quantitative approach and a proprietary methodology to attempt to identify certain sectors, subsectors, and individual securities that the data indicates should have a greater ability to improve the risk adjusted returns for the Fund over the course of a full market cycle. The quantitative approach and proprietary methodology are based on the analysis of thousands of securities where the turning points in key macro drivers of growth, liquidity and risk appetite are identified. Macro drivers are broad factors, variables or events that have a significant impact on the overall economy of a country or region. These drivers (such as interest rates, inflation, unemployment rate, GDP, etc.) can influence economic growth, inflation, employment, and other key economic indicators. The daily price movements of these securities are evaluated in respect to predetermined benchmarks, and then the potential of the expected performance of the investment is measured through a proprietary statistical and formulaic scoring system which models the appetite to buy, resilience to sell, the breadth and strength of the market, and rate of change and strength of trend, into a representative score (based on historical price action, time, market conditions and other potential factors) that assists the portfolio manager in identifying opportunity and provides further analysis of the potential investment and performance of the security. Once these sectors, subsectors, and individual securities have been identified, the Fund increases its allocation to these preferred holdings through a variety of methods including owning the underlying securities themselves, owning an ETF that is representative of the sector or subsector, or through the use of options that can either provide greater exposure to an asset or sector or, at other times, provide protection as part of a broader risk management strategy. The fixed income securities in which the Fund will invest will be investment grade and may be of any duration or maturity.

The Fund will employ a risk management strategy intended to manage the volatility of the Fund’s returns and manage the overall risk of investing in the Fund. The risk management strategy monitors technical metrics on equity indices that may identify periods where there is potential for higher equity market risk. These technical metrics use mathematically based tools to identify positive or negative trends in equity indices, so, when the technical metrics identify a negative trend, there may be a potential for higher equity market risk. When periods of declining equity markets are more likely, the risk management strategy will reduce equity exposure. When employing this risk management strategy, the Fund may allocate a significant percentage of its assets to cash and cash equivalents. When employing the risk management strategy, in addition to cash and cash equivalents, the Fund may utilize a hedge overlay for downside protection, which will include put and call options and ETFs that have exposure to changes in volatility or offer inverse performance to equity markets (inverse ETFs). The hedge overlay will be used when the Advisor believes there is the potential for higher risk of loss in equity markets.

The Portfolio Funds will not be limited in their investments by market capitalization or sector criteria, and may invest in foreign securities, including foreign securities in emerging markets. The Portfolio Funds in which the Fund invests will have investment objectives similar to the Fund’s or will otherwise hold permitted investments under the Fund’s investment policies. Although the Fund principally invests in Portfolio Funds with no sales-related expenses or very low sales related expenses, the Fund is not precluded from investing in Portfolio Funds with sales-related expenses, redemption fees, and/or service

fees. The portfolio manager will sell a Portfolio Fund when a more attractive investment opportunity is identified, or the Fund's portfolio needs to be rebalanced due to increases or decreases in the Fund's net assets. As a result of its strategy, the Fund may have a relatively high level of portfolio turnover compared to other mutual funds, which may affect the Fund's performance due to higher transactions costs and higher taxes. Portfolio turnover will not be a limiting factor in making investment decisions.

PRINCIPAL RISKS OF INVESTING IN THE FUND

The loss of your money is a principal risk of investing in the Fund. Investments in the Fund are subject to investment risks, including the possible loss of some or the entire principal amount invested. There can be no assurance that the Fund will be successful in meeting its investment objective. An investment in the Fund is not a deposit or obligation of any bank, is not endorsed or guaranteed by any bank, and is not insured by the Federal Deposit Insurance Corporation or any other government agency. The Fund will be subject to the following principal risks:

Common Stock Risk. Investments in shares of common stock may fluctuate in value response to many factors, including the activities of the individual issuers whose securities the Fund or Portfolio Fund owns, general market and economic conditions, interest rates, and specific industry changes. Such price fluctuations subject the Fund to potential losses. During temporary or extended bear markets, the value of common stocks will decline, which could also result in losses for the Fund.

Control of Portfolio Funds Risk. The Portfolio Funds each have their own unique investment objective, strategies, and risks. There is no guarantee that the Portfolio Funds will achieve their investment objectives and the Fund has exposure to the investment risks of the Portfolio Funds in direct proportion to the allocation of assets among the funds. The investment policies of the Portfolio Funds may differ from the Fund's policies.

Although the Fund and the Advisor will evaluate regularly each Portfolio Fund to determine whether its investment program is consistent with the Fund's investment objective, the Advisor will not have any control over the investments made by a Portfolio Fund. The investment advisor to each Portfolio Fund may change aspects of its investment strategies at any time. The Advisor will not have the ability to control or otherwise influence the composition of the investment portfolio of a Portfolio Fund.

Equity Securities Risk. Investments in equity securities may fluctuate in value response to many factors, including the activities of the individual issuers whose securities the Portfolio Fund owns, general market and economic conditions, interest rates, and specific industry changes. Such price fluctuations subject the Fund to potential losses. During temporary or extended bear markets, the value of equity securities will decline, which could also result in losses for the Fund.

Fixed Income Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest

payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

ETF Investing Risk. The Fund's investment in ETFs may subject the Fund to additional risks than if the Fund would have invested directly in the ETF's underlying securities. These risks include the possibility that an ETF may experience a lack of liquidity that can result in greater volatility than its underlying securities, an ETF may trade at a premium or discount to its net asset value, or an ETF may not replicate exactly the performance of the benchmark index it seeks to track. In addition, investing in an ETF may also be costlier than if the Fund had owned the underlying securities directly. The Fund and, indirectly, shareholders of the Fund, bear a proportionate share of the ETF's expenses, which include management and advisory fees and other expenses. In addition, the Fund will pay brokerage commissions in connection with the purchase and sale of the ETFs in its portfolio.

Inverse ETF Risk. Investments in inverse ETFs will prevent the Fund from participating in market-wide or sector-wide gains and may not prove to be an effective hedge. During periods of increased volatility, inverse ETFs may not perform in the manner they are designed.

Managed Volatility Risk. Techniques used by the Advisor to manage the volatility of the Fund's investments carry the risks that such techniques may not protect against market declines. The techniques may also limit the Fund's participation in market gains, particularly during periods where market values are increasing but market volatility is high. Further, such techniques may increase portfolio transaction costs, which could result in losses or reduced gains. They also may not be successful as the techniques are subject to the Advisor's ability to correctly analyze and implement the volatility management techniques in a timely manner.

Fund Investing Risk. Investments in other investment companies subject the Fund to additional operating and management fees and expenses. Investors in the Fund will indirectly bear fees and expenses charged by the funds in which the Fund invests, in addition to the Fund's direct fees and expenses. The Fund's performance depends in part upon the performance of the investment advisor to each Portfolio Fund, the strategies and instruments used by the Portfolio Funds, and the Advisor's ability to select Portfolio Funds and effectively allocate fund assets among them.

Cash and Cash Equivalents Risk. At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time.

Risks from Selling or Writing Options. Writing option contracts can result in losses that exceed the Fund's initial investment and may lead to additional turnover and higher tax liability. The risk involved in writing a call option is that there could be an increase in the market value of the security. If this occurred, the option could be exercised and the underlying security would then be sold by the Fund at a lower price than its current market value or in the case of cash settled options, the Fund would be required to purchase the option at a price that is higher than the original sales price for such option. Similarly, while writing call options can reduce the risk of owning stocks, such a strategy limits the

opportunity of the Fund to profit from an increase in the market value of stocks in exchange for up-front cash at the time of selling the call option. The risk involved in writing a put option is that there could be a decrease in the market value of the underlying security. If this occurred, the option could be exercised and the underlying security would then be sold to the Fund at a higher price than its current market value or in the case of cash settled options, the Fund would be required to purchase the option at a price that is higher than the original sales price for such option.

Risks from Purchasing Options. If a call or put option purchased by the Fund is not sold when it has remaining value and if the market price of the underlying security, in the case of a call, remains less than or equal to the exercise price, or, in the case of a put, remains equal to or greater than the exercise price, the Fund will lose its entire investment in the option. Since many factors influence the value of an option, including the price of the underlying security, the exercise price, the time to expiration, the interest rate, and the dividend rate of the underlying security, the Advisor's success in implementing the Fund's strategy may depend on an ability to predict movements in the prices of individual securities, fluctuations in markets, and movements in interest rates. There is no assurance that a liquid market will exist when the Fund seeks to close out an option position. Where a position in a purchased option is used as a hedge against price movements in a related position, the price of the option may move more or less than the price of the related position.

Counterparty Credit Risk. The stability and liquidity of many derivative transactions depends in large part on the creditworthiness of the parties to the transactions. If a counterparty to such a transaction defaults, exercising contractual rights may involve delays or costs for the Fund. Furthermore, there is a risk that a counterparty could become the subject of insolvency proceedings, and that the recovery of securities and other assets from such counterparty will be delayed or be of a value less than the value of the securities or assets originally entrusted to such counterparty.

Foreign Securities and Emerging Markets Risk. Foreign securities have investment risks different from those associated with domestic securities. The value of foreign investments may be affected by the value of the local currency relative to the U.S. dollar, changes in exchange control regulations, application of foreign tax laws, changes in governmental economic or monetary policy, or changed circumstances in dealings between nations. There may be less government supervision of foreign markets, resulting in non-uniform accounting practices and less publicly available information about issuers of foreign securities. In addition, foreign brokerage commissions, custody fees, and other costs of investing in foreign securities are often higher than in the United States. Investments in foreign issues could be affected by other factors not present in the United States, including expropriation, armed conflict, confiscatory taxation, and potential difficulties in enforcing contractual obligations. In addition to the risks of foreign securities in general, countries in emerging markets are more volatile and can have relatively unstable governments, social and legal systems that do not protect shareholders, economies based on only a few industries, there may be greater market manipulation, and securities markets that trade a small number of issues which could reduce liquidity. There is also less publicly available information on emerging market companies due to differences in regulation, accounting, auditing, and financial recordkeeping requirements, and the information available may be unreliable or outdated.

Investment Advisor Risk. The portfolio manager's ability to choose suitable investments has a significant impact on the ability of the Fund to achieve its investment objectives.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's portfolio securities, the Sub-Advisor will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results. The Sub-Advisor's decisions relating to the Fund's duration will also affect the Fund's yield, and in unusual circumstances will affect its share price. To the extent that the Sub-Advisor anticipates interest rates imprecisely, the Fund's yield at times could lag those of other similarly managed funds.

Large-Cap Securities Risk. Stocks of large companies as a group can fall out of favor with the market, causing the Fund to underperform investments that have a greater focus on mid-cap or small-cap stocks. Larger, more established companies may be slow to respond to challenges and may grow more slowly than smaller companies.

Market Risk. Market risk refers to the possibility that the value of securities held by the Fund may decline due to daily fluctuations in the market. Market prices for securities change daily as a result of many factors, including developments affecting the condition of both individual companies and the market in general. The price of a security may even be affected by factors unrelated to the value or condition of its issuer, including changes in interest rates, economic and political conditions, and general market conditions. The Fund's performance per share will change daily in response to such factors.

Portfolio Turnover Risk. The portfolio manager will sell Portfolio Funds and other securities when it is in the best interest of the Fund and its shareholders to do so without regard to the length of time they have been held. As portfolio turnover may involve paying brokerage commissions and other transaction costs, there could be additional expenses for the Fund. High rates of portfolio turnover may also result in the realization of short-term capital gains and losses. Any distributions resulting from such gains will be considered ordinary income for federal income tax purposes.

Quantitative Model Risk. Portfolio Funds or other investments selected using quantitative methods may perform differently from the market as a whole. There can be no assurance that these methodologies will enable the Fund to achieve its objective.

Small-Cap and Mid-Cap Securities Risk. Investments in securities of small-cap and mid-cap companies involve greater volatility than investing in larger and more established companies. Small-cap and mid-cap companies can be subject to more abrupt or erratic share price changes than larger, more established companies. Securities of these types of companies have limited market liquidity, and their prices may be more volatile. You should expect that the value of the Portfolio Fund's shares will be more volatile than a fund that invests exclusively in large-capitalization companies.

Cybersecurity Risk. As part of its business, the Advisor processes, stores, and transmits large amounts of electronic information, including information relating to the transactions of the Fund. The Advisor and the Fund are therefore susceptible to cybersecurity risk. Cybersecurity failures or breaches of the Fund or its service providers have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, the inability of Fund shareholders to transact business, violations of applicable privacy and

other laws, regulatory fines, penalties, and/or reputational damage. The Fund and its shareholders could be negatively impacted as a result.

Investment Risk. Various sectors of the global financial markets have been experiencing an extended period of adverse conditions. Market uncertainty has increased dramatically, particularly in the United States and Europe, and adverse market conditions have expanded to other markets. These conditions have resulted in disruption of markets, periods of reduced liquidity, greater volatility, general volatility of spreads, an acute contraction in the availability of credit and a lack of price transparency. The long-term impact of these events is uncertain but could continue to have a material effect on general economic conditions, consumer and business confidence, and market liquidity.

Major public health issues, such as COVID-19, have at times, and may in the future impact the Fund. The COVID-19 pandemic caused substantial market volatility and global business disruption and impacted the global economy in significant and unforeseen ways. Any public health emergency, including the COVID-19 pandemic or any outbreak of other existing or new epidemic diseases or the threat thereof, and the resulting financial and economic market uncertainty, could have a material adverse impact on the Fund or its investments. Moreover, changes in interest rates, travel advisories, quarantines and restrictions, disrupted supply chains and industries, impact on labor markets, reduced liquidity or a slowdown in U.S. or global economic conditions resulting from a future public health crisis may also adversely affect the Fund or its investments. COVID-19, or any other health crisis and the current or any resulting financial, economic and capital markets environment, and future developments in these and other areas present uncertainty and risk with respect to the Fund's NAV, performance, financial condition, results of operations, ability to pay distributions, make share repurchases and portfolio liquidity, among other factors.

Economic problems in a single country are increasingly affecting other markets and economies, and a continuation of this trend could adversely affect global economic conditions and world markets. Uncertainty and volatility in the financial markets and political systems of the U.S. or any other country, including volatility as a result of the ongoing conflicts between Russia and Ukraine and Israel and Hamas and the rapidly evolving measures in response, may have adverse spill-over effects into the global financial markets generally.

Authorized Participant Risk. Only an authorized participant ("Authorized Participant" or "APs") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). Authorized Participant concentration risk may be heightened for exchange-traded funds (ETFs), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

ETF Structure Risks. The Fund is structured as an ETF and as a result is subject to the special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at net asset value ("NAV") only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough Shares to constitute a Creation Unit.

- *Trading Issues.* An active trading market for the Shares may not be developed or maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Shares. Any absence of an active trading market, in turn, lead to a heightened risk of a difference between the market price of the Fund's shares and the value of the shares, which would be reflected in a wider bid-ask spread.
- *Cash purchases.* To the extent Creation Units are purchased by APs in cash instead of in-kind, the Fund will incur certain costs such as brokerage expenses and taxable gains and losses. These costs could be imposed on the Fund and impact the NAV if not fully offset by transaction fees paid by the APs.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. A bid-ask spread is the difference between the price quoted in the market for an immediate sale (bid) and an immediate purchase (ask) of the ETF's shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV and the bid-ask spread could widen.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Shares and the NAV, and the bid-ask spread could widen.
 - To the extent authorized participants exit the business or are unable to process creations or redemptions and no other AP can step in to do so, there may be a significantly reduced trading market in the Shares, which can lead to differences between the market value of Shares and the NAV, and the bid-ask spread could widen.
 - The market price for the Shares may deviate from the NAV, particularly during times of market stress, with the result that investors may pay significantly more or receive significantly less for Shares than the NAV, which is reflected in the bid and ask price for Shares or in the closing price.
 - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Shares and the NAV, and the bid-ask spread could widen.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences

between the market value of the Shares and the NAV, and the bid-ask spread could widen.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

PERFORMANCE INFORMATION

The following bar chart and table provide an indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the average annual total returns for the Fund compared to that of a broad-based securities market index. The Fund acquired all of the assets and liabilities of the Adaptive Growth Opportunities Fund, a series of Starboard Investment Trust (the "Trust"), (the "Predecessor Fund") in a tax-free reorganization on May 7, 2021. In connection with this acquisition, shares of the Predecessor Fund's Institutional Class shares, Class A shares, and Class C shares were exchanged for shares of the Fund. The Predecessor Fund had an investment objective and strategies that were, in all material respects, the same as those of the Fund, and was managed in a manner that, in all material respects, complied with the investment guidelines and restrictions of the Fund. The performance information set forth below reflects the historical performance of the Predecessor Fund shares. Prior to July 31, 2015, the Fund had a different investment advisor. The Fund changed its investment strategy effective June 9, 2023. The performance information set forth below does not reflect the Fund's current strategy or ETF structure. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available online at <https://etfpages.com/AGOX>.

During the periods shown in the bar chart above the Fund's highest quarterly return was 27.40% (quarter ended June 30, 2020) and lowest quarterly return was -15.95% (quarter ended March 31, 2020). The Fund's year-to-date return as of June 30, 2024, was 14.89%.

Average Annual Total Returns Periods Ended December 31, 2023	Past 1 Year	Past 5 Years	Past 10 Years	Since Inception (9/20/2012)
Adaptive Alpha Opportunities ETF				
Before taxes	18.27%	13.42%	9.25%	10.50%
After taxes on distributions	18.14%	12.62%	8.51%	9.80%
After taxes on distributions and sale of shares	10.82%	10.47%	7.28%	8.46%
MSCI ACWI Index ¹ (reflects no deductions for fees and expenses)	20.09%	9.79%	5.93%	6.31%
Morningstar Moderate Aggressive Target Risk TR Index (reflects no deductions for fees and expenses)	15.98%	9.30%	6.92%	7.94%

¹The Fund's primary benchmark was changed from the Morningstar Moderate Aggressive Target Risk TR Index to the MSCI ACWI Index because the MSCI ACWI Index is a broader based securities index.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown and are not applicable to investors who hold Shares through tax-deferred arrangements such as a 401(k) plan or an individual retirement account (IRA).

MANAGEMENT

Investment Advisor. Cavalier Investments, LLC d/b/a Adaptive Investments, serves as the Fund's investment advisor.

Investment Sub-Advisor. Bluestone Capital Management, LLC (the "Sub-Advisor" or "Bluestone"), serves as the Fund's investment sub-advisor.

Portfolio Manager. The Fund's portfolio manager is Brian Shevland. Mr. Shevland has provided services to the Fund since September 2018.

For important information about Purchase and Redemption of Shares, Tax Information, and Payments to Broker-Dealers and Other Financial Intermediaries, please turn to page 48 of the prospectus.

PURCHASE AND REDEMPTION OF SHARES

The Fund will issue and redeem Shares at NAV only in large blocks of 10,000 Shares (each block of Shares is called a "Creation Unit"). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units in transactions with APs, the Shares are not redeemable securities of the Fund.

Individual Shares may only be bought and sold in the secondary market through a broker or dealer at a market price. Because ETF shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). An

investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the “bid-ask spread”). You may access recent information, including information on the NAV, Market Price, premiums and discounts, and bid-ask spreads, on the Fund’s website at <https://etfpages.com/AGOX>.

TAX INFORMATION

Fund distributions are generally taxable to you as ordinary income or capital gains, unless you are investing through a tax deferred arrangement, such as a 401(k) plan or an individual retirement account (IRA). Distributions on investments made through tax deferred arrangement will generally be taxed later upon withdrawal of assets from those accounts.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) the Fund, and its related companies, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
